

Samiul Miah

Ht1600@wayne.edu (586-224-1308)

EDUCATION

Wayne State University, Detroit, MI

Exp. May 2028

B.S. In Biomedical Engineering

Macomb Mathematics Science Technology Center, Warren, MI

May 2024

High School Diploma, STEM concentration

PROFESSIONAL EXPERIENCE

Wayne State University, Detroit, MI

Sept. 2024
Current

Injury / Biomechanics Student Research Assistant

- Researcher under PI Dr. Cameron Bass, conducted wet lab experimentation and autopsy procedure, co-authored 3-point bone bending research paper presented at WCB 2026.

Veterans Thrift Store, Roseville, MI

Aug. 2022
Dec 2024

Customer Service Associate

- Customer Sales Representative, Implemented and trained employees on POS system

PROJECTS & EXTRACURRICULAR

3 Point Bone Bending

Current

- Created a novel 3-point bone breaking apparatus to visualize and measure bone fracture propagation mechanics.
- Co-First Author, improved experimental apparatus through machining of custom parts, conducted literature review, authored submitted abstract, introduction, and manuscript.

Centrifugal Pupils (Spotlight on Design)

Dec. 2024

- Developed a prototype for cost-effective, lightweight and portable centrifuge design.
- R&D Engineer, Wired breadboard and coded Arduino to create working centrifuge, developed housing of individual components through NX CAD modeling software, created final presentation, poster and video.

Ideal G force level in order to optimize growth rate and length of Raphanus Sativus.

Dec. 2023

- Determined at which, of varying G forces optimized the growth of radish seeds by means of centrifuge.
- Co-First Author, created experimental rig, collected trial data and performed statistical analysis, presented findings and data analysis before a panel of judges and 2024 Detroit Science Fair (Huntington Place).

SKILLS

Programming languages: Matlab, C++, Python

Computer Software/ Frameworks: Microsoft Office, Windows 10, Siemens NX, SolidWorks

Languages: English, Bengali

Field Clinical Specialist - Detroit, MI - Peripheral Vascular (STRYKER)

<https://careers.stryker.com/field-clinical-specialist-detroit-mi-peripheral-vascular/job/687DDE6EC7CFA5F23173920DCB635FB1>

Job description

The Field Clinical Specialist works using independent judgement, partners with local Account Managers to increase clinical support, education resulting in increased clinical acumen.

Responsibilities

- Educate physicians on device handling, implantation and troubleshooting techniques related to Inari products.
- Develop, lead and/or facilitate training sessions and in-service education programs in the hospital environment.
- Identify therapy adoption opportunities in collaboration with Regional and Account Managers in local geographies.
- Communicate highly technical information clearly and effectively during fast-paced procedures.
- Act as a clinical interface between the medical community and the Company.
- Demonstrate ability to build and sustain credible business relationships with customers and share product expertise accordingly.
- Provide education and clinical support in response to the most complex field inquiries on an as-needed basis.
- Demonstrate a thorough understanding of all Inari products, related products and technical knowledge, trends, and players.
- Collaborate with product development teams to provide feedback on device features and new device development
- Document procedural case observations for regulatory requirements and ongoing continuous improvement

Qualifications

- Associates degree in nursing or related clinical discipline preferred.
- Minimum three (3) years of equivalent combination of education, training, and hands-on experience in a cath lab, nursing, or comparable clinical environment.
- Proven understanding of cardiovascular science, cardiovascular anatomy, pathology and physiology
- Strong clinical acumen is required.
- Understanding of sales process is a plus.
- Travel up to 80% of the time – both locally and regionally, and occasionally overnight.
- Night/weekend on call per preplanned scheduled.
- Extensive sitting, standing, and speaking.
- Must be open to a dynamic work environment which includes regular interaction with several different physician and hospital staff customers in several locations.
- Excellent command of the English language with comprehensive written and verbal communication, interpersonal, analytical, and organizational skills.

Hiring Manager
Stryker
Peripheral Vascular
Detroit, MI

Dear Hiring Manager:

I am applying for the Field Clinical Specialist position in Detroit with Stryker's Peripheral Vascular team. I am currently pursuing a bachelor's degree in biomedical engineering at Wayne State University, expecting to graduate in May 2028. The most interesting component of this job to me is bridging the gap between a device's development, and innerworkings, while also helping to implement it in a meaningful way to help a patient. Your emphasis on physician education and feedback on product development makes this role especially meaningful to me.

In Dr. Cameron Bass's biomechanics lab, I helped develop a three-point bone-bending apparatus to study how fractures propagate. Through machining custom parts and contributing to the research manuscript, I have been able to connect what I learn conceptually with something I can build and investigate tangibly. This experience has strengthened my interest in understanding why equipment behaves the way it does, allowing me to learn about Inari products and simultaneously supporting device improvement.

At Veterans Thrift Store, I also trained employees on a newly implemented point-of-sale system. Experience which gave me practice explaining an unfamiliar tool to others, a skill I want to continue developing in healthcare. Through my current experience in research and customer service, I am motivated to build the clinical knowledge this position requires and already have a familiar platform to build from.

Thank you for considering my application. I would welcome the opportunity to discuss my background and interest in your team.

Regards,

Samiul Miah
